

LAUNDRY DETERGENT

DepHyze™ Laundry Detergent Powder and Liquid Formulation

DepHyze™ Laundry Detergent was developed on the floor at one of the largest commercial laundries in the USA. The end result was a superior laundry cleaning detergent. The formulation not only cleans typical soils but restores clothing with mold and mildew damage. Laboratory tests prove that after washing with DepHyze™ Laundry Detergent a "ZONE" of inhabitation exists on the fabric. The "ZONE" is a barrier that will not allow microorganisms to grow. This barrier is safe and is very closely related to that of a typical fabric softener.

Benefits of DepHyze™ Laundry Detergent

- For an average 200 lb. commercial load of laundry, only 2 gallons of DepHyze™ detergent is required. In a similar load using standard laundry detergent over 6 gallons of detergent was needed. Field trials using DepHyze™ Laundry Detergent show an average reduction of 20 minutes in the wash cycle and resulting in a 1/3 less water use.
- DepHyze™ only requires the programming of two chemical components. A standard industrial washing machine will require liquid soap, brake, sour, softener, bleach and a booster to be programmed into its wash cycle. With DepHyze™, these steps are not required and therefore the wash cycle is shortened.
- DepHyze™ Laundry is a powerful decontaminant, disinfectant, and moldicide available in a powder and liquid formulation for disinfection, decontamination, de-molding, and mold prevention in industrial and consumer laundry machines.
